

VELOSIT is a young and innovative company. We combine decades of experience in R&D, production and consulting for high performance construction materials which are fully conversant with modern construction techniques.

Our mission is to make construction faster, easier and less tedious. **VELOSIT** products allow you to finish your project significantly faster without compromising on quality.

VELOSIT supplies the construction industry with state-of-the-art alternative solutions. Production „made in Germany“ stands for uniform quality to the highest standards.

If you have questions - just give us a call!

We can individually tailor a suitable solution for you. Our service and technical support will gladly help.

Decorative Flooring Systems

Our core competence is the creation of time saving functional flooring systems. Besides its „function“ we have developed various solutions to give these products an even more aesthetic appearance. On the following pages you will find a few ideas what is possible with our products that are otherwise known for their rugged performance.

Cementitious Overlays

VELOSIT® SL 502

Universal self leveling underlayment

VELOSIT® SL 503

High strength self leveling overlayment

Flexible Cementitious Floor Coatings

Our flexible cementitious flooring products offer a combination of a crack bridging waterproof coating combined with appealing aesthetics. The two white versions of **VELOSIT® WP 120** can be tinted to a huge selection of colors with inorganic pigments. The products are especially suitable for areas with mainly pedestrian or light vehicle traffic:

- pool and patio decks
- residential drive or walk ways
- balconies

VELOSIT® WP 120 white

Highly flexible cementitious waterproofing slurry.

VELOSIT® WP 120 HD

Abrasion resistant cementitious waterproofing slurry.

VELOSIT® SL 505

High strength self leveling overlayment, white

These self leveling overlayments for thin applications (usually in the range of 1/4“) offer very smooth surface finishes that are suitable for further surface enhancement like:

- staining
- polishing with impregnation
- pigmenting

In combination with colored aggregates the **VELOSIT® SL** products can also be used as a binder for Terrazzo floors.

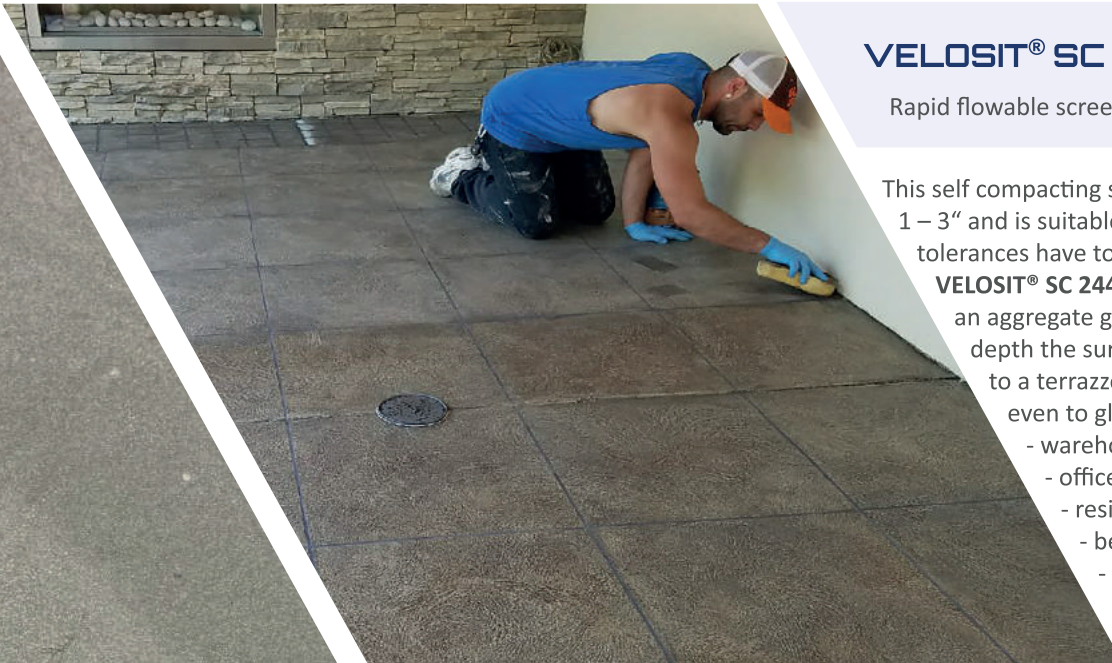

VELOSIT® SC 244

Rapid flowable screed

This self compacting screed (or thick overlayment) is applied in layers of 1 – 3“ and is suitable for rough surface profiles especially when height tolerances have to be leveled.

VELOSIT® SC 244 can be tinted with inorganic pigments. It contains an aggregate grading of various colors. Depending on the grinding depth the surface can come out like a „salt and pepper“ or close to a terrazzo appearance. The surface is perfect for polishing even to gloss. Our cementitious overlays are used on:

- warehouse floors
- offices
- residential floors
- below ground parking structures
- retail floors

Epoxy Coatings

Our epoxy moisture barrier **VELOSIT® PR 303** is a functional coating and mainly used as a primer on damp concrete substrates. It is normally covered with another coating system but can also be used as a stand alone solution. The combination of its gray color with color flakes gives a beautiful look that combines with its properties as a protective coating.

Application fields are for example:

- elevator pits
- garage floors
- repair shops
- basement floors

VELOSIT® PR 303

Epoxy primer and vapor barrier
